DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-23,78-82 are rejected under 35 U.S.C. 102(e) as being anticipated by Park (U.S. Patent No. 5,971,546).

As per claim 1, Park shows offsetting the green pixels from the red and blue pixels by about half (In Fig.10, 19,24,28).

As per claims 2,7 Park shows a projector is offsetting optically (in Col.2 lines 44-53).

As per claims 3,8 projector is offsetting mechanically (in Col.4 lines 26-42).

As per claims 4,29 Park shows a cathode ray tube video and offsetting electrostatic ally (In col.9 lines 19-32).

As per claims 5,9,10,21 Park shows cathode ray tube video display and the offsetting are magnetically (in Fig.11 and in col.6 lines 54-62).

As per claim 6, Park shows offsetting red pixel and green and blue by one third (in Fig.24).

Art Unit: 2673

As per claims 11,12,13,19 park shows projecting for each pixel in the multipixel image a plurality of monochrome beams of different colors towards the imaging surface (In fig.25 having different light source) and directing each of the plurality of monochromes beams for each of the pixel along a beam path towards the imaging surface (In fig. 25), the image formed on the imaging surface from each of the beam are converged by substantially less than about 100%(in col.12 using different plate using different value of lambda).

As per claims 14,18 park shows optical elements projection system with transparent material describing monotonic function (In col.8 lines 58-67, col.9 lines 1-7).

As per claim 78, park shows illuminating a multispectral light source (in fig.17) and projecting light from toward the panel using X and Y matrix and using a third of the pixel color subtractive pixels from each pixel (in fig.19 and 24).

As per claim 79, Park shows using different color panels with multiple layers of different colors in various display panel (in col.13 lines 1-14).

As per claim 80-83, Park shows using different color plates to achieve a panel offset by approximately 75% and 50% (in col7 line 30-52 using mathematical equation).

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nitin Patel whose telephone number is 571-272-7677. The examiner can normally be reached on 8:00-5:00.
